Single Layer

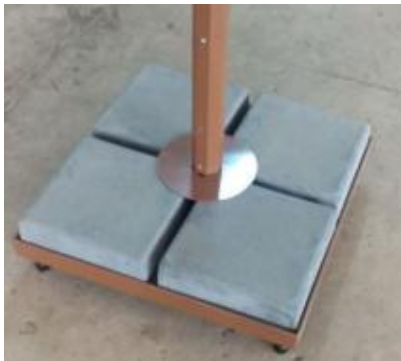

Double Layer

Three Layer

Bumbershoot Umbrella Comes in three designs.(i.e Single layer, double layer and three layer)and in two shapes (i.e. Round and Square)

90 Kg Umbrella Base

Technology behind Bumbershoot.....

These umbrellas have been designed for excellence and engineered to serve commercial outdoor restaurant/terrace owners as attractive and the most efficient weather shelters suitable to stabilize their outdoor revenues.

Heavy-Duty Materials

- Structural folding frame made of high-tenacity aluminium
- Dia. 70-mm major pole (with inner m 35/35-mm moving pole guided torsion less) made of octagonal hollow-section aluminium profile with exterior ridges smoothed "fabric-compatible".
- Articulated arms, stretchers and reversers made of rectangular hollow-section aluminium profiles with ridges smoothed fabric-compatible, sectional dimensions .
- Functional components such as the torsion less slider carriage, the pole-stiffening adapter rail insert, and both tensioning latches are CNC machined out of extruded aluminium.
- Articulated tensioners (2 of them) are made out of stainless steel of grade 304 . All fixed slider bearings are made of non-hygroscopic synthetic resin material.

The Unfolding & Tensioning System

The Umbrella's drive less and fail-safe kinematic system enables even female operators to easily fold and unfold this large-size umbrella structure.

CANTILEVER UMBRELLA

(Rotates 360 Degree)

Crank

Cantilever Umbrella comes
with 90Kg Base

Ideal solutions for shade systems

Create your own shade wherever you want...

In the right spot, in the right time...

Just the right amount

Removes the need for a heavy Base/Center pole

One attachment to the Wall for **WALL FLEX**

Ease of use..

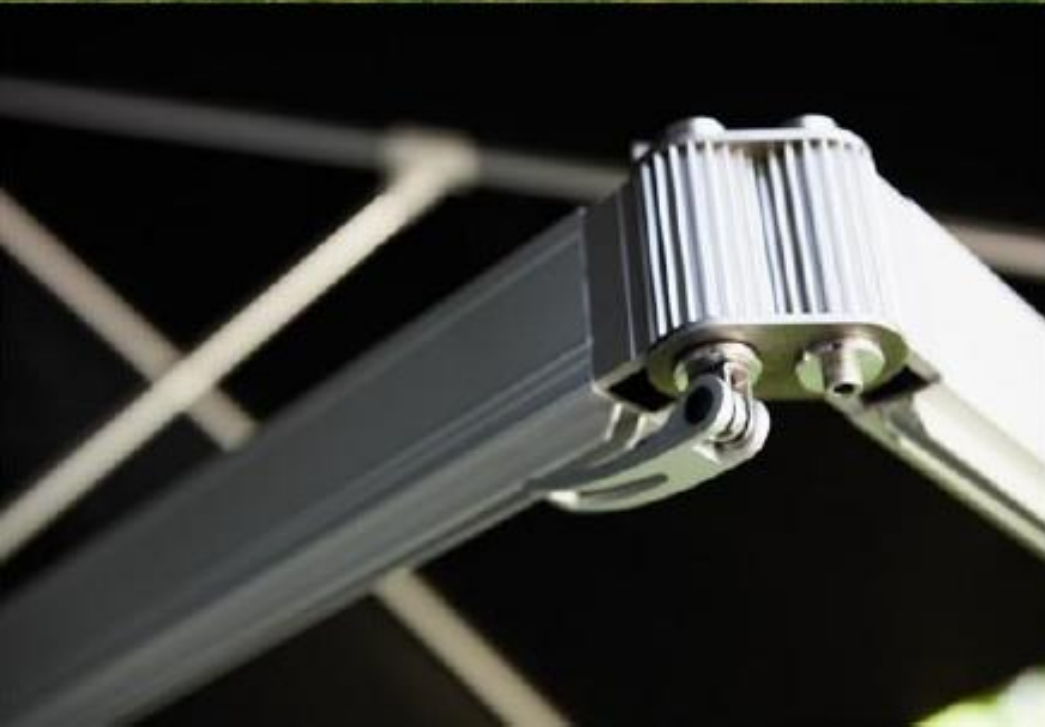

You can take out the umbrella thanks to its ingenious clamp system with a simple push of a button and can tilt the umbrella into a desired position

Maximum flexibility

The umbrella is extremely flexible thanks to its hinge design.

By opening the handle the umbrella arm can easily and quickly be removed.

The arm can be demounted easily for use.

Available
in**

**1.9 m Sq
2.2 m Hex
2.7 m Hex**

Easy to store

You can close the umbrella in two ways, either take it out of the clamp and close it or leave it on the arm and close it thanks to the zipper in the umbrella cover

Extension arms available in 1.85 m length

Removes the need of a heavy base as can be bolted directly on to the surface

Umbrella centre pole can be fixed to the wall thanks to the ingenious stainless steel brackets.

Removes the need of a heavy base as can be bolted directly on to the surface

Total Quality

The paraflex arm and umbrella is made of aluminum and stainless steel parts. All plastic parts are specially UV resistant for longevity.
